## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ito et al. in view of Byun et al..

Regarding claims 1, 3-5, 8-11, referencing Figure 8, Ito et al. discloses a semiconductor structure provided with a substrate (11); a first layer (31) formed above the substrate; and a textured nitride layer (35) formed on the first layer. (Abstract)

Regarding claim 2, referencing Figure 8, Ito et al. further discloses providing a metal layer (20) formed above the textured nitride layer. (Abstract)

Regarding claim 6, referencing Figure 8, Ito et al. further discloses that the semiconductor structure is used in a light-emitting device (30). (Abstract)

Regarding claim 7, referencing Figure 8, Ito et al. further discloses that the first layer (31) comprises a crystalline nitride layer (i.e. AlN). (Abstract)

Unfortunately, regarding claim 1, Ito et al. fails to disclose providing a buffer layer between the substrate and the first layer.

However, referencing Figures 6A-6B, Byun et al. discloses providing a buffer layer (31) between a substrate layer (30) and a textured nitride layer (32). (Column 5, lines 27-61.)

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a buffer layer as disclosed by Byun in the semiconductor device as disclosed by Ito et al. in order to protect the substrate from the overlying textured nitride layer. (Column 5, lines 27-61.)

### ***Allowable Subject Matter***

Claims 12-20 are allowed.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
